Dataset Key	
Unique Identifier	Identification number assigned to the patient to maintain confidentiality
DOB	Date of Birth in mm/dd/yyyy format
Sex	Determination of Female or Male ("f" meaning female, "m" meaning male)
Neuter Status	Age grouping in which the patient was neutered: < 6 mo., 6 - 11 mo., 1 yr., 2 - 8 yr., and intact (if the patient was not neutered)
Neuter Date	Date of neuter procedure in mm/dd/yyyy format
Intact Start Date	First date the patient was seen during the study range as an intact dog in mm/dd/yyyy format
Intact End Date	Last date the patient was seen during the study range as an intact dog in mm/dd/yyyy format
Neuter Start Date	First date the patient was seen during the study range as a neutered dog in mm/dd/yyyy format
Neuter End Date	Last date the patient was seen during the study range as a neutered dog in mm/dd/yyyy format
Diseases	Date of onset/diagnosis is in mm/dd/yyyy format Invalid for the disease means that either the disease onset/diagnosis occurred before study range or the disease was not confirmed through the appropriate diagnostic criteria (refer to paper for more detail) If for a specific disease, the onset/diagnosis date occurred before the neuter date, the patient was included in the intact group for that disease
HD	Hip dysplasia
CCL	Cranial cruciate ligament tear/rupture
ED	Elbow dysplasia
LSA	Lymphosarcoma
MCT	Mast cell tumor
HSA	Hemangiosarcoma
MC	Mammary cancer
PYO	Pyometra
